

## **Munich/Garching Dark Matter meeting**

Mar, 24th - 11am

**Speaker:** Moritz Hütten (MPP)

**Title:**

Indirect searches for Dark Matter in the high-energy sky

**Abstract:**

Abstract: Indirect Dark Matter (DM) searches probe astrophysical DM reservoirs for messengers from particle DM. In this talk, I will give an overview of the many telescopes hunting for indirect signals from various astrophysical targets, and what we have learned so far. A special focus will be drawn on searches in high-energy gamma rays with Fermi-LAT, MAGIC, and the future Cherenkov Telescope Array.
