* *INTEGRAL* (IGR) name of the source. A dagger symbol † marks that the source is located in the region of high systematic noise, and that its measured flux should be **treated with caution**.

† Equatorial coordinates (right ascension and declination) are in standard J2000.0 epoch.

‡ The measured 17–60 keV flux of the source $\times 10^{-11} \text{ erg cm}^{-2} \text{ s}^{-1}$.

§ General astrophysical type of the object: AGN – active galactic nucleus, SNR – supernova remnant; CV – cataclysmic variable; PSR – isolated pulsar or pulsar wind nebula (PWN). A question mark indicates that the specified type should be confirmed.
