1/1-1/1

Pseudoscalar: EB correlation

 The observed pattern of the CMB polarization can be decomposed into eigenstates of parity, called "E modes" and "B modes".

- E and B modes are transformed differently under the parity transformation. Therefore, the product of the two, the "EB correlation", is a pseudoscalar.
- The full-sky average of the EB correlation must vanish (to within the measurement uncertainty), if there is no parity violation!

 $\langle T_{\boldsymbol{\ell}} E_{\boldsymbol{\ell}'}^* \rangle = \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}}^* E_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'}^{TE} - \boldsymbol{\ell}' \langle T_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'} \rangle = (2\pi)^2 \delta_D^{(2)} (\boldsymbol{\ell} - \boldsymbol{\ell}') C_{\boldsymbol{\ell}'} + (2\pi)^2 \delta_D^$

 $\langle T_{\ell} E_{\ell'}^* \rangle = \langle T_{\ell}^* E_{\ell'} \rangle = (2\pi)^2 \delta_D^{(2)} (\ell - \ell') C_{\ell'}^* \square$

are pseudoscalars and sensitive to parity violation!

CMB Power Spectra Progress over 30 years

- This is the typical figure seen in talks and lectures on the CMB.
 - The temperature and the E- and B-mode polarization power spectra are well measured.
- Parity violation appears in the TB and EB power spectra, not shown here.

Eskilt, EK (2022) **This is the EB power spectrum (WMAP+Planck)** Galactic plane removed (62% of the sky)

Cosmic Birefringence: Rotation of the Plane of Linear Polarization

How does the EM wave of the CMB propagate?

The surface of "last scattering" by electrons

1-----

"Cosmic Birefringence"

If the plane of linear polarization of the CMB is rotated uniformly by β , it is the sign of parity violation!

Lue, Wang, Kamionkowski (1999); Feng et al. (2005, 2006) E-B mixing by rotation of the plane of linear polarization

- Observed E- and B-mode polarization, E^o and B_l^o, are related to those before rotation as
- $E^{o}_{\ell} \pm i B^{o}_{\ell} = (E_{\ell} \pm i B_{\ell}) e^{\pm 2i\beta}$
- which gives
- $E_{\ell}^{o} = E_{\ell} \cos(2\beta) B_{\ell} \sin(2\beta)$
- $B_{\ell}^{o} = E_{\ell} \sin(2\beta) + B_{\ell} \cos(2\beta)$

CMB Power Spectra

24

BB

- Rotation of the plane of linear polarization **mixes** E and B modes.
- Therefore, the EB correlation will be given by the difference between the EE and BB correlations.
- Observed EE is much greater than BB. We expect EB to look like EE!

$$C_{\ell}^{EB,o} = \frac{\tan(4\beta)}{2} \left(C_{\ell}^{EE,o} - C_{\ell}^{BB,o} \right)$$

Cosmic Birefringence fits well(?) $C_{\ell}^{EB,o} = \frac{\tan(4\beta)}{2}$ $\left(C_{\ell}^{EE,\mathrm{o}} - C_{\ell}^{BB,\mathrm{o}}\right)$ Nearly full-sky data (92% of the sky)

Eskilt, EK (2022)

$\tan(4\beta)$ **Cosmic Birefringence fits well(?)** $C_{\ell}^{EB,o} =$ $\left(C_{\ell}^{EE,\mathrm{o}} - C_{\ell}^{BB,\mathrm{o}}\right)$ Galactic plane removed (62% of the sky)

Eskilt, EK (2022)

The Biggest Problem: Miscalibration of detectors

Wu et al. (2009); Miller, Shimon, Keating (2009); EK et al. (2011) Impact of miscalibration of polarization angles **Cosmic or Instrumental?**

- respect to the sky coordinates (and we did not know it)?

(but we do not know it)

 Is the plane of linear polarization rotated by the genuine cosmic birefringence effect, or simply because the polarization-sensitive directions of the detectors are rotated with

If the detectors are rotated by α , it seems that we can measure only the SUM $\alpha+\beta$.

The past measurements The quoted uncertainties are all statistical only (68%CL)

- $\alpha + \beta = -6.0 \pm 4.0 \text{ deg}$ (Feng et al. 2006)
- $\alpha+\beta = -1.1 \pm 1.4$ deg (WMAP Collaboration, Komatsu et al. 2009; 2011)
- $\alpha+\beta = 0.55 \pm 0.82$ deg (QUaD Collaboration, Wu et al. 2009)
- - -
- $\alpha+\beta = 0.31 \pm 0.05$ deg (Planck Collaboration 2016)
- $\alpha + \beta = -0.61 \pm 0.22$ deg (POLARBEAR Collaboration 2020)
- $\alpha+\beta = 0.63 \pm 0.04 \text{ deg}$ (SPT Collaboration, Bianchini et al. 2020)
- $\alpha+\beta = 0.12 \pm 0.06$ deg (ACT Collaboration, Namikawa et al. 2020)
- $\alpha + \beta = 0.07 \pm 0.09$ deg (ACT Collaboration, Choi et al. 2020)

first measurement

The past measurements Now including the estimated systematic errors on a • $\beta = -6.0 \pm 4.0 \pm ??$ deg (Feng et al. 2006)

- $\beta = -1.1 \pm 1.4 \pm 1.5$ deg (WMAP Collaboration, Komatsu et al. 2009; 2011)
- $\beta = 0.55 \pm 0.82 \pm 0.55$ deg (QUaD Collaboration, Wu et al. 2009)
- •
- $\beta = 0.31 \pm 0.05 \pm 0.28$ deg (Planck Collaboration 2016)
- $\beta = -0.61 \pm 0.22 \pm ??$ deg (POLARBEAR Collaboration 2020)
- $\beta = 0.63 \pm 0.04 \pm ??$ deg (SPT Collaboration, Bianchini et al. 2020)
- $\beta = 0.12 \pm 0.06 \pm ??$ deg (ACT Collaboration, Namikawa et al. 2020)
- $\beta = 0.07 \pm 0.09 \pm ??$ deg (ACT Collaboration, Choi et al. 2020)

Uncertainty in the calibration of a has been the major limitation

The Key Idea: The polarized Galactic foreground emission as a calibrator

Minami et al. (2019); Minami, EK (2020)

ESA's Planck

Polarized dust emission within our Milky Way!

Directions of the magnetic field inferred from polarization of the thermal dust emission in the Milky Way

Credit: ESA

Emitted "right there" - it would not be affected by the cosmic birefringence.

Minami, EK (2020); Diego-Palazuelos et al. (2022); Eskilt, EK (2022) **Miscalibration angles (WMAP and Planck)** Nearly full-sky data (92% of the sky)

LFI HFI **WMAP** β

- The angles are all over the place, and are well within the quoted calibration uncertainty of instruments.
 - 1.5 deg for WMAP
 - 1 deg for Planck
- They cancel!
 - The power of adding independent datasets.

1.5

Eskilt (2022); Eskilt, EK (2022) No frequency dependence is found It is not due to Faraday rotation.

- $0.33^{\circ} \pm 0.10^{\circ}$ 353
 - Light traveling in a uniform magnetic field also experiences a rotation of the plane of linear polarization, called "Faraday rotation". However, the rotation angle depends on the frequency, as $\beta(\nu) \propto \nu^{-2}$.
 - No evidence for frequency dependence is found!
 - For $\beta \propto \nu^n$, $n = -0.20^{+0.41}_{-0.39}$ (68% CL)
 - Faraday rotation (n = -2) is disfavoured.

Diego-Palazuelos et al. (2022, 2023); Eskilt et al., arXiv:2305.02268 Is *\beta* caused by non-cosmological effects? We need to measure it in independent experiments.

- The known instrumental effects of the WMAP and Planck missions are shown to have negligible effects on β .
 - However, we can never rule out unknown instrumental effects... We need to measure β in independent experiments.
- The polarized Galactic foreground emission was used to calibrate the instrumental polarization angles, α . The intrinsic EB correlations of the Galactic foreground emission (polarized dust and synchrotron emission) could affect the results.
 - We need to measure β without relying on the foreground by calibrating α well, e.g., Murata et al. (Simons Observatory), arXiv:2309.02035; Murphy et al. (ACT), arXiv:2403.00763; Cornelison et al. (BICEP3), arXiv:2410.12089; Ritacco et al. (COSMOCal), arXiv:2405.12135.

ACT Collaboration, arXiv:2503.14452 **Atacama Cosmology Telescope (DR6)** We need to measure it in independent experiments -> here it is!

$\begin{array}{l} Combined \\ \beta = 0.26 \, \pm \, 0.061 \, \deg \, (4.3\sigma) \end{array}$

Eskilt & Komatsu (2022) WMAP9 +Planck(PR4)

Combined $\beta = 0.223 \pm 0.062 \text{ deg} (3.6\sigma)$

Eskilt et al. (2023) WMAP9 +Planck(Cosmoglobe)

Combined $\beta = 0.171 \pm 0.042 \text{ deg}$ (4.0σ)

Louis et al. (2025) ACT (DR6)

$0.0 \quad 0.1 \quad 0.2 \quad 0.3 \quad 0.4 \quad 0.5 \quad 0.6$ Cosmic Birefringence Angle, β [degrees]

What are we worried about now? "Unknown Unknowns"

- WMAP+Planck
 - our results depend crucially on it.
- ACT
 - The biggest worry: The model for the optics of the ACT telescope and instruments may not capture all the systematics.
- The way forward: We will need another independent measurement, using an
 - coming soon!

• The biggest worry: Unknown systematics in the Planck HFI at 353 GHz, since

artificial polarization source. This will remove the dependence on any models.

 BICEP3 (Cornelison et al., arXiv:2410.12089) and the Simons Observatory (Murata et al., arXiv:2309.02035) are doing exactly that. The final word is

Implications **DM = Dark Matter; DE = Dark Energy**

$$I = \int d^4x \sqrt{-g} \left[-\frac{1}{2} (\partial \chi)^2 - V(\chi) - \frac{1}{4} F^2 - \frac{\alpha}{4f} \chi F \right]$$

This rotates the plane of linear polarization of light by

EK, Nature Rev. Phys. 4, 452 (2022)

This term exists for a pion. What if DM/DE is "pion-like particle"

Implications **DM = Dark Matter; DE = Dark Energy**

$$I = \int d^4x \sqrt{-g} \left[-\frac{1}{2} (\partial \chi)^2 - V(\chi) - \frac{1}{4} F^2 - \frac{\alpha}{4f} \chi F \right]$$

• The measured angle, β , implies that the field has evolved by

$$\Delta \chi = \chi(\tau_{\rm obs}) - \chi(\tau_{\rm em}) \, 4$$

- If it is due to DE: this measurement rules out DE being a cosmological constant.
- If it is due to DM: at least a fraction of DM violates parity symmetry.

EK, Nature Rev. Phys. 4, 452 (2022)

This term exists for a pion. What if DM/DE is "pion-like particle"

So, space may be filled with axionlike particles...

d

a

 ≤ 1

Summary Let's find new physics!

- Violation of parity symmetry is a new topic in cosmology.
- It may hold the answers to fundamental questions, such as
 - What is Dark Matter?
 - What is Dark Energy?
- Since parity is violated in the weak interaction, it seems natural to expect that parity is also violated in the Dark Sector.
 - 4σ hint of Cosmic Birefringence: Space may be filled with parity-violating DM and DE fields?
- What else should we be looking? New and exciting research topics.
